Respond to App Store reviews

Users get an email if the developer responds to their review

Developer links are not functioning URLs

You can force touch to
rate a review!

Q SKStoreReviewController

SKStoreReviewController

Type Methods

M requestReview()

SKStoreReviewController

SKStoreReviewController

SKStoreReviewController

Controls the process of requesting App Store ratings and reviews from users.

Overview

Use the `requestReview()` method to indicate when it makes sense to ask the user for ratings and review within your app.

Language

Swift | Objective-C

SDKs

iOS 10.3+

Inherits From

NSObject

Conforms To

Notes

- Testflight builds show rating UI but actually do nothing
- May or may not present an alert, don't present in response to a button tap or other user action.
- up to three prompts in a 365-day period
- developer.apple.com/app-store/ratings-and-reviews/

Swift 3.1

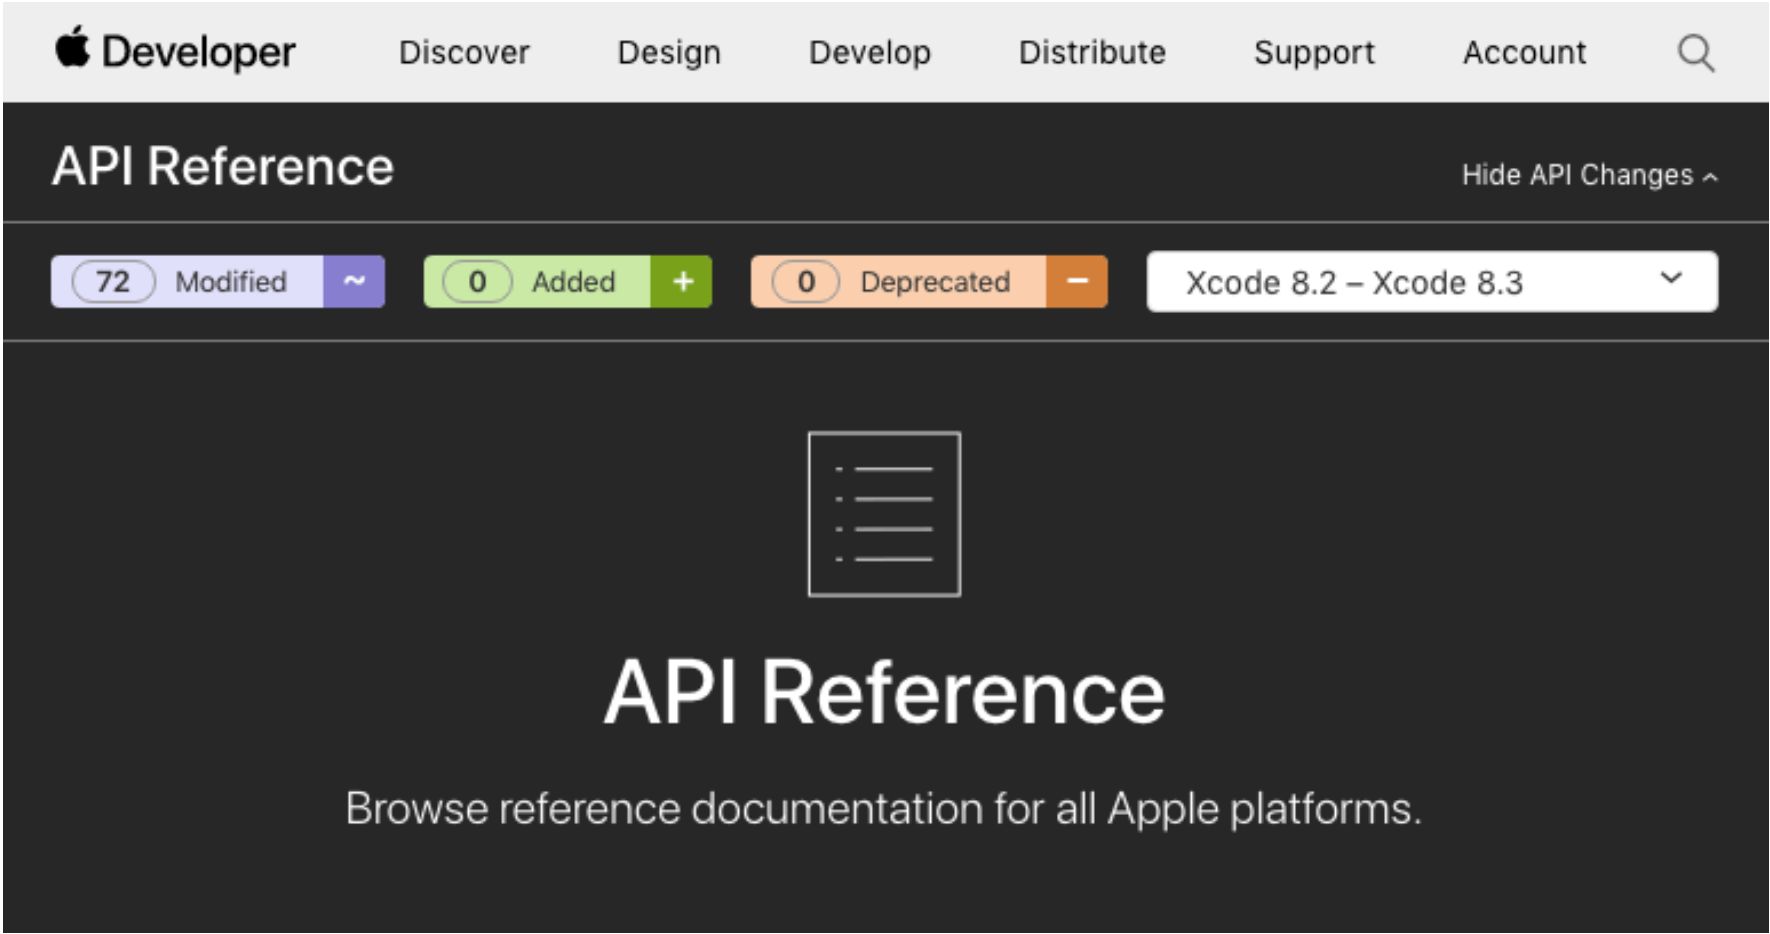

Feature summary on raywenderlich.com

<https://www.raywenderlich.com/156352/whats-new-in-swift-3-1>

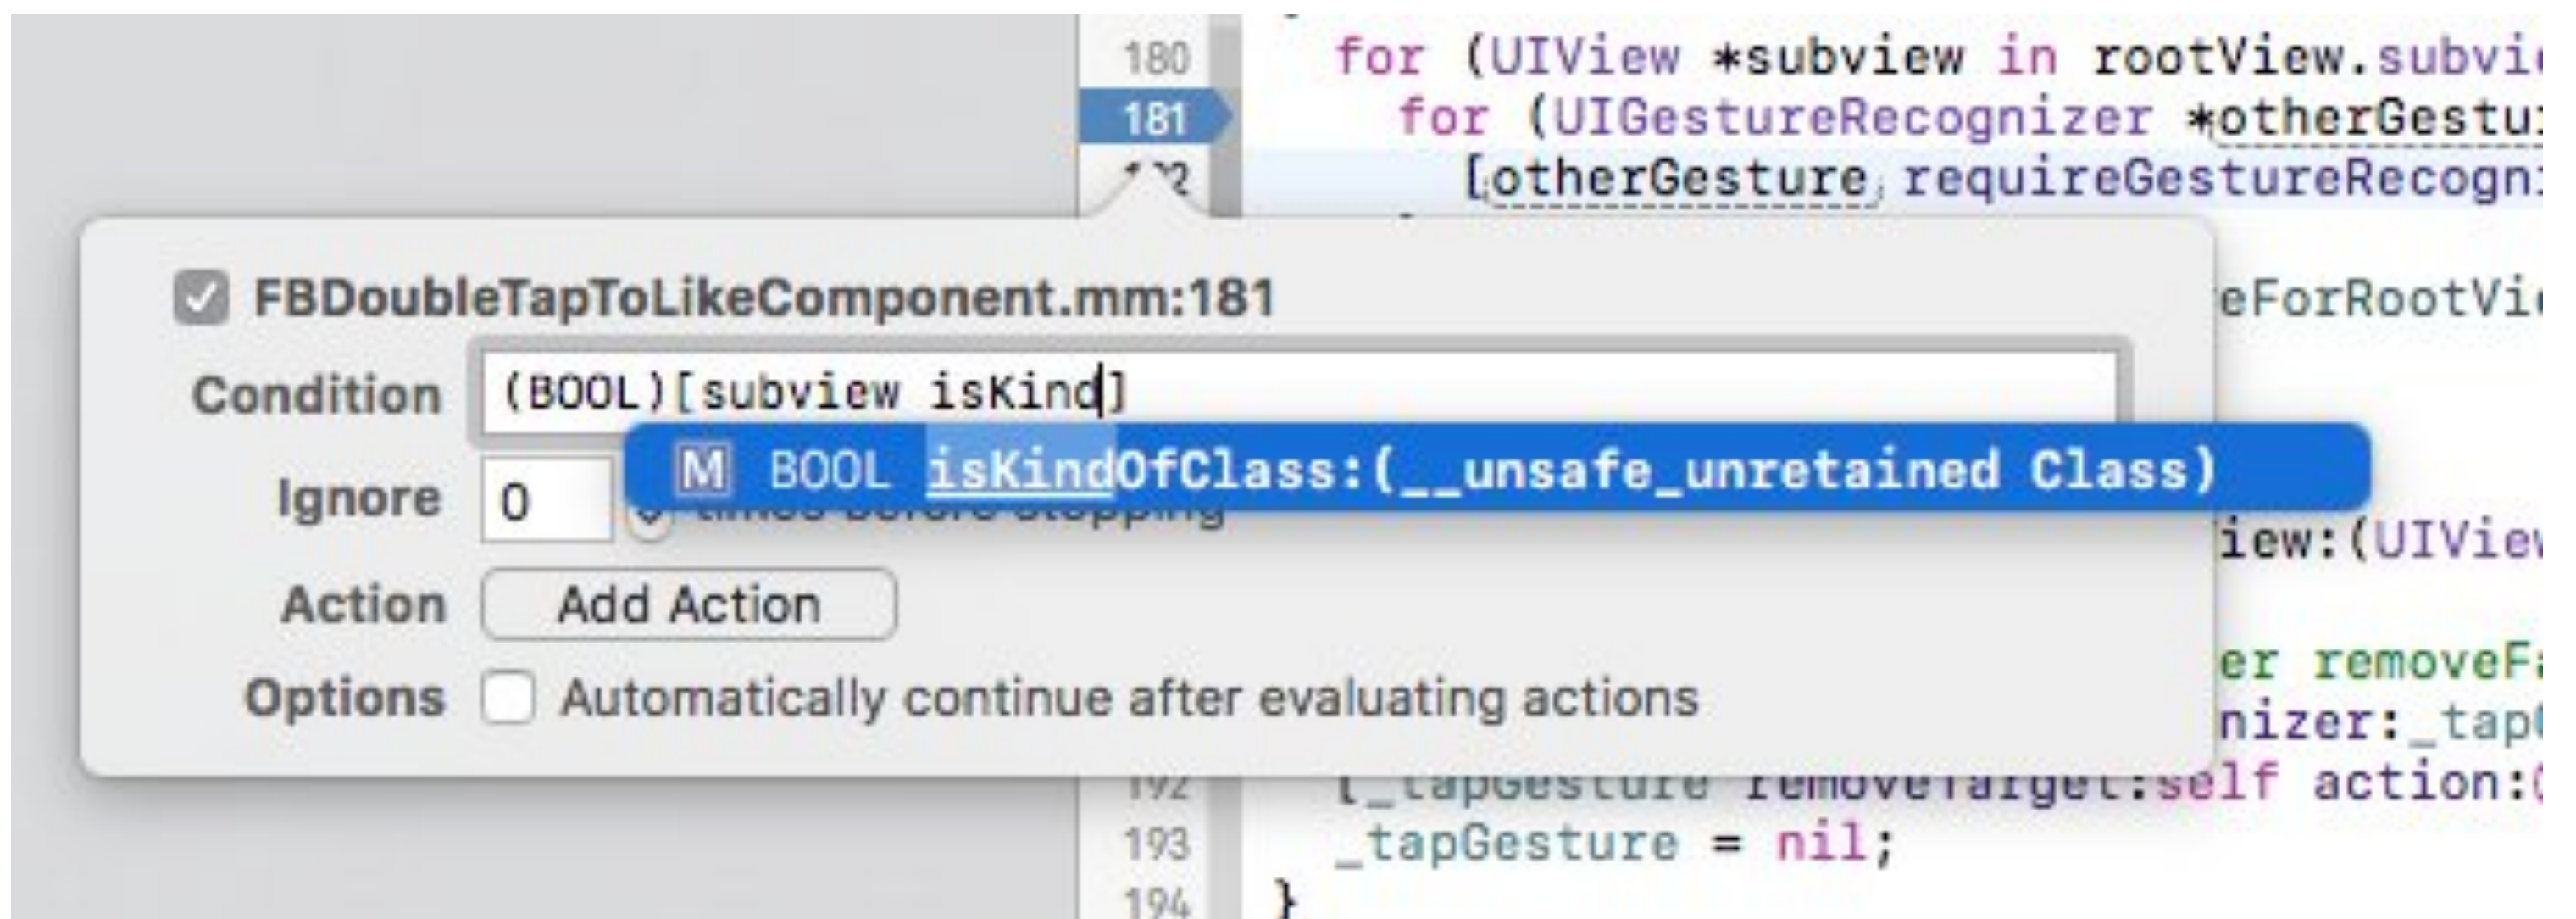

Xcode 8.3

Changes

https://developer.apple.com/reference?
changes=latest_minor

Features

Bugs

Open Radar

Community bug reports

Xcode 8.3 produces binaries 3x larger than Xcode 8.2 due to a 4x increase in bitcode

Open Radar

Community bug reports

Xcode 8.3 (8E162) entitlements files variables always resolve against debug configuration

Warnings on 'Hot Code Push SDKs'

rollout.io users have begun seeing Review rejections based on:

"combined with a remote resource, can facilitate significant changes to your app's behavior from that reviewed"

"Even if the remote resource is not intentionally malicious, could easily be hijacked via a MiTM attack"

"any code which passes arbitrary parameters to dynamic methods such as `dlopen()`, `dlsym()`, `respondToSelector:`, `performSelector:`, `method_exchangeImplementations()`"

Swifts Pointy Bits

A talk about Swift and Unsafe code.

<https://realm.io/news/nate-cook-tryswift-tokyo-unsafe-swift-and-pointer-types>

Asserting equality

Check for outdated equality operators automatically (at runtime)

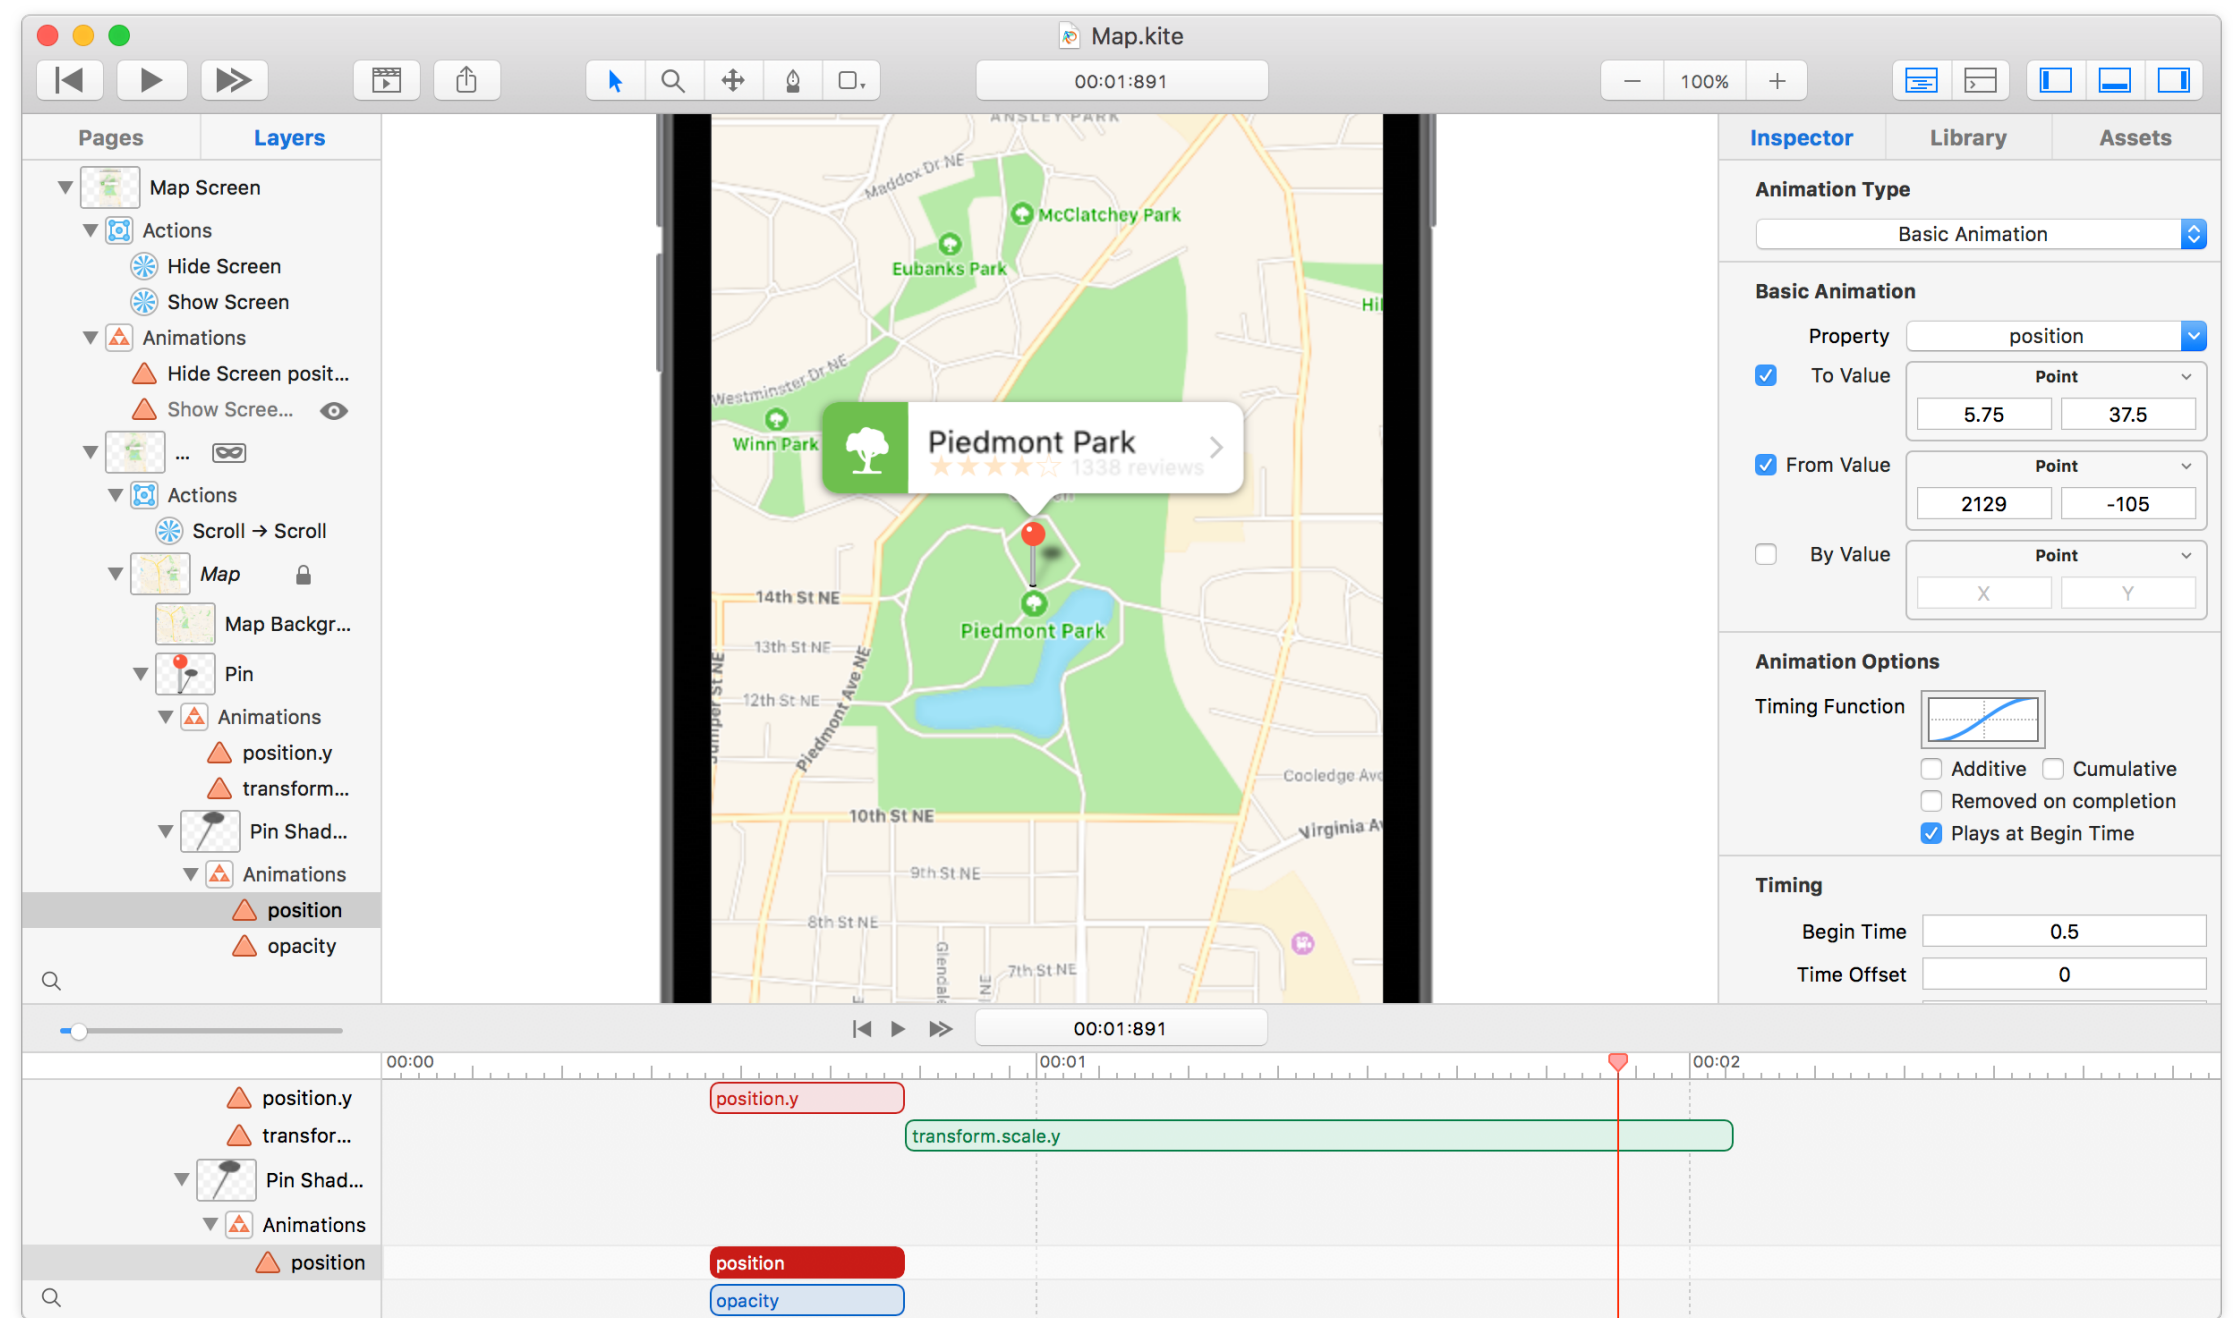

```
static func ==(lhs: Person, rhs: Person) -> Bool {  
    let areEqual = lhs.name == rhs.name  
    if areEqual {  
        assertDumpsEqual(lhs, rhs)  
    }  
    return areEqual  
}
```

It can be easy to let == fall out of sync with your struct if you add fields

^ This will alert you if you forget

Swift Plate

Generate cross platform Swift framework projects

- CocoaPods
- Carthage
- Swift Package Manager
- iOS
- macOS
- watchOS
- tvOS

```
1_John@Alpha-Pixel: ~/code/amazingProject (zsh)
→ amazingProject swiftplate
Welcome to the SwiftPlate project generator 🍷
📁 Where would you like to generate a project? (Leave empty to use current directory)

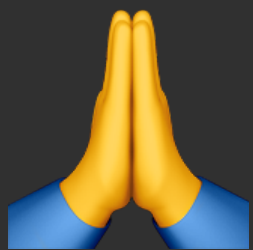

🏠 What's the name of your project?
AmazingProject
👤 What's your name?
John Sundell
📧 What's your email address (for Podspec)? You may leave this empty.
john@sundell.co
🌐 Any GitHub URL that you'll be hosting this project at (for Podspec)? You may leave this empty.
https://github.com/johnsundell/amazingproject
-----
SwiftPlate will now generate a project with the following parameters:
📁 Destination: /Users/John/Code/amazingProject
🏠 Name: AmazingProject
👤 Author: John Sundell
📧 Author email: john@sundell.co
🌐 GitHub URL: https://github.com/johnsundell/amazingproject
-----
Proceed? ✅ (Y/N)
Y
🔪 Starting to generate project AmazingProject...
👉 Removing any previous temporary folder...
✅ Done
👉 Making temporary folder (/Users/John/Code/amazingProject/swiftplate_temp)...
✅ Done
👉 Making a local clone of the SwiftPlate repo...
✅ Done
👉 Copying template folder...
✅ Done
👉 Removing temporary folder...
✅ Done
👉 Filling in template...
✅ Done
All done! 🎉 Good luck with your project! 🍷
